ABSTRACT

Rohilkhand region is a part of north-west Uttar Pradesh where grasses are found wild as well as in cultivated state. During the investigation 86 grass species under 4 tribes of sub-family Panicoideae were recorded from different climatic conditions. Tribe Paniceae showed maximum representation of grass species with 45. Two tribes namely Arundinelleae and Paspaleae are poorly represented in the study area.

Keywords: Panicoideae, grasses, herbarium, Rohilkhand region.

Introduction

The grasses not only serve as food for human consumption, but also hold greater values. Some grasses like *Dicanthium annulatum*, *Imperata cylindrica* and *Elusine indica* have fibrous roots which help in soil binding and also check the soil erosion (Silvy Mathew *et al.*, 2014) and sand dunes (Patel *et al.*, 2012). The members are mostly annual or perennial herbs with Bamboos (*Bambusa* and *Dendrocalamus*) as woody members. GPWG-II (2012) classified grasses and all grasses were placed in 12 subfamilies and 51 tribes.

Materials and methods

Study area: Rohilkhand is a part of north-western Uttar Pradesh and made up of nine districts namely Moradabad, Rampur, Sambhal, J.P. Nagar, Bijnor, Bareilly, Budaun, Pilibhit and Shahjahanpur and has physical area of about twenty-six hundred square kilometre (Fig.1). It is situated between latitudes 27°35' to 29°58' N and longitudes 78°0' to 80°27' E. The name Rohilkhand was given by Ahmad Shah Abdali in 1748. The winter average maximum temperature 13.75°C and minimum temperature 6°C whereas summer average daily maximum temperature is 42.20°C. The average rain fall was recorded 932 mm. during the survey period.

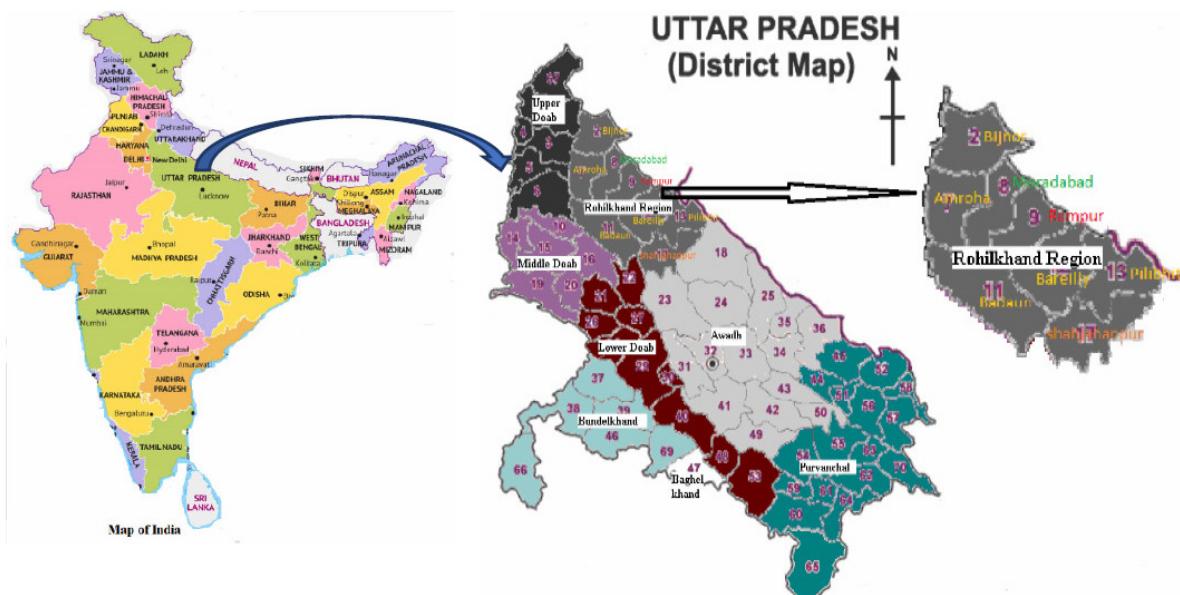

Fig. 1 : Map of India, U.P. and Rohilkhand region

Methodology: The present study on sub-family Panicoideae of grasses in Rohilkhand region of U.P. was carried out during the years 2017-2019. Several field trips were organized to collect grass specimens in all three seasons. During study period, all possible localities for grasses in Rohilkhand region have been observed. Photographs of various species were also taken in the field. Information about habitat type, flowering and fruiting time was collected in field notebooks. Grass specimens were identified with the help of available floras like Bor, (1960), Clayton & Renvoize (1989), Watson & Dallwitz (1994), Moulik (1997), Barkworth *et al.* (2007) and Ashwini *et al.* (2014). Identification of unsure specimens were complete in FRI herbarium, Dehradun and BSI herbarium, Allahabad. Online databases e.g., the Kew, 'Grass Base-the Online World Grass Flora' at <http://www.kew.org/data/grasses-db.html> was also consulted. Herbarium was prepared according to Jain and Rao (1976) and submitted in the Department of Botany, Hindu College, Moradabad for future use.

Results and Discussion

A total 86 grass species were recorded from the study area (Table 1.). Subfamily Panicoideae represented by 4 tribes namely Andropogoneae, Arundinelleae, Paniceae and Paspaleae. District Pilibhit showed maximum number of species (58) followed by Bijnor (42) because these areas have suitable conditions for the growth of grasses (Table 2). District Moradabad exhibited 33 species whereas

Shahjahanpur and Badaun shared equal number of species (32). District Amroha with 24 species while both Bareilly and Sambhal showed 22 species. District Rampur had lowest number of species (20). Different number of species occurred in different parts of Rohilkhand region due to various soil types, variation in temperature and availability of water. Nineteen grass species viz. *Bothriochloa bladhii* (Retz.) S.T. Blake, *Capillipedium assimile* (Steud.) A. Camus, *Chrysopogon fulvus* (Spreng.) Chiov., *Cyrtococcum patens* (L.) A. Camus, *Eriochloa procera* (Retz.) C.E. Hubb., *Eulalia leschenaultiana* (Decne.) Ohwi, *Eulalia trispicata* (Schult.) Henrard., *Eulaliopsis binata* (Retz.) C.E. Hubb., *Hymenachne amplexicaulis* (Rudge) Nees, *Ischaemum rugosum* Salisb., *Mnesitheia laevis* (Retz.) Kunth, *Oplismenus compositus* (L.) P.Beauv., *Panicum paludosum* Roxb., *Polygonatherum crinitum* (Thunb.) Kunth, *Polygonatherum paniceum* (Lam.) Hack., *Saccharum narenga* (Nees ex Steud.) Hack., *Sacciolepsis indica* (L.) Chase and *Sorghum nitidum* (Vahl) Pers were recorded from only Pilibhit district. Ten grass species viz. *Arundinella nepalensis* Trin., *Brachiaria subquadripala* (Trin) Hitchc., *Coix aquatica* Roxb., *Cymbopogon martinii* (Roxb.) Wats., *Digitaria longiflora* (Retz.) Pers., *Digitaria violascens* Link, *Paspalidium punctatum* (Burm. F.) A.Camus, *Paspalum scrobiculatum* L., *Pennisetum flaccidum* Griseb. and *Themeda anathera* (Nees ex Steud) Hack were found only in Bijnor district whereas one species, *Themeda quadrivalvis* (L.) O. Kuntz was recorded from only Budaun district.

Table 1 : Showing number of tribes, genus and species in subfamily-Panicoideae.

S.N.	Tribes	Species	No.G.	No.S.	Status
1.	I-Andropogoneae	<i>Apluda mutica</i> L.	1	2	Wild
2.		<i>Apluda mutica</i> subsp. <i>aristata</i> (L.) Babu			Wild
3.		<i>Bothriochloa bladhii</i> (Retz.) S.T.Blake	1	2	Wild
4.		<i>Bothriochloa pertusa</i> (L.) A.Camus			Wild
5.		<i>Capillipedium assimile</i> (Steud.) A.Camus	1	1	Wild
6.		<i>Chrysopogon aciculatus</i> (Retz.) Trin.	1	3	Wild
7.		<i>Chrysopogon fulvus</i> (Spreng.) Chiov.			Wild
8.		<i>Chrysopogon zizanioides</i> (L.) Roberty			Wild
9.		<i>Coix aquatica</i> Roxb.	1	2	Cultivated
10.		<i>Coix lacryma-jobi</i> L.			Wild
11.		<i>Cymbopogon citratus</i> (DC.) Stapf.	1	2	Wild
12.		<i>Cymbopogon martinii</i> (Roxb.) Wats.			Wild
13.		<i>Dichanthium annulatum</i> (Forssk.) Stapf	1	2	Wild
14.		<i>Dichanthium aristatum</i> (Poir.) Hubb.			Wild
15.		<i>Eulalia leschenaultiana</i> (Decne.) Ohwi	1	2	Wild
