Abstract

The state of West Bengal lies between $21^{\circ} 45'$ to $27^{\circ} 16'$ N latitude and $85^{\circ} 55'$ to $89^{\circ} 56'$ E longitude, covering an area of 87, 676 Sq. Km. which is about one third in area of the pre-partitioned Bengal province. In the present work analyzing the data given in the table 1, it is found that, the state of West Bengal harbor 460 Species & 6 varieties of Orchids, belonging to 110 genera. Out of the 466 taxa of Orchid, 321 are epiphytic, 2 are mycophytes, 1 – is saprophytes and the residual 142 taxa are terrestrial.

Key words : Orchids, West Bengal State, Taxonomy, Census.

Introduction

The state of West Bengal comes to exists on 15th August 1947, with the independence and partition of the British ruled Indian territory. During the process of the partition of the then Bengal Province of the British throne Sir Cyril Radcliff demarcated the partition line East – West Direction and the Eastern part of the “Radcliff’s” Line was demarcated as the East Pakistan and which is now designated as the independent country Bangladesh and the Western half of the Line is included in the Indian territory and named as West Bengal nee Paschim Banga.

The state of West Bengal lies between $21^{\circ} 45'$ to $27^{\circ} 16'$ N latitude and $85^{\circ} 55'$ to $89^{\circ} 56'$ E longitude, covering an area of 87, 676 Sq. Km. which is about one third in area of the pre-partitioned Bengal province. Not only that, partitioned by the arbitrary Radcliffs Line the five district of the Northern halves of the state viz., Alipur Duar, Kalimpong, Darjeeling, Jalpaiguri, and Koch Bihar more or less isolated from the rest Southern part of the state except a narrow corridor through Uttar Dinajpur (Anonymous, 1997).

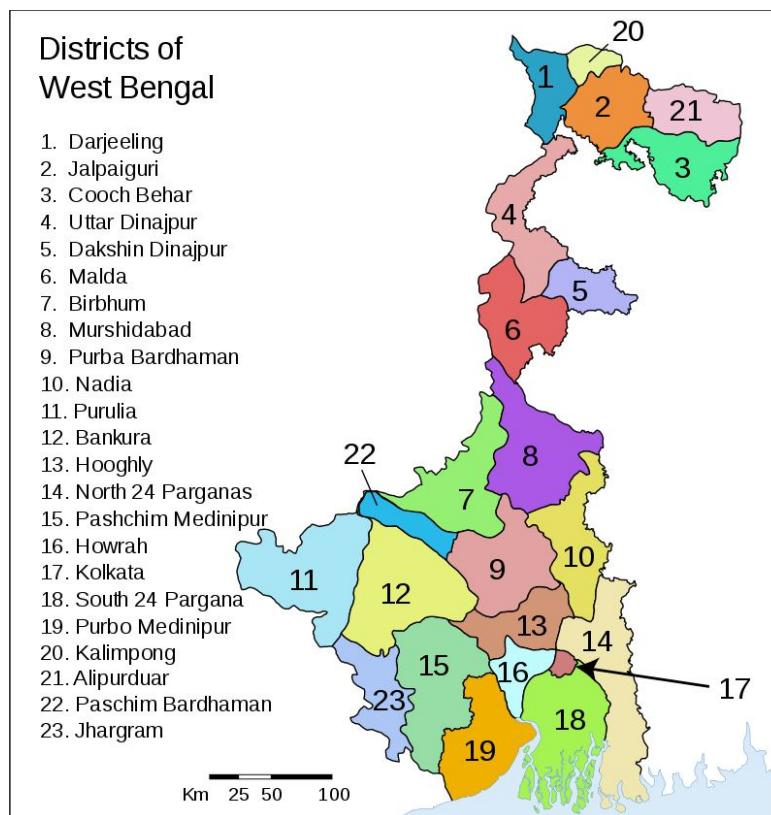

This is the only state of the India which have a flora ranging from the most impressive littoral Mangrove

*Author for correspondence : E-mail: drsunitmitra.1@gmail.com

Forest of the Sundarnans to the luxuriant vegetation of the Himalayan foot hills of the Terai region and the vegetation upward culminating to the temperate zone in the Districts of Darjeeling Himalayas (Bhattacharya, 1997). It is bounded by the Bangladesh and State of Assam in the East, Sikkim state and a portion of the Nepal and Bhutan configure its Northern Boundary, the western Boundary is demarcated by the state of Bihar, Jharkhand, and Orissa and the rolling waves of Bay of Bengal bordered the Southern boundary of the state.

At present the state of West Bengal is divided in to 23 district comprising of more than 400 blocks and over 4300 villeges (District Map of the state is given below).

Except the Western districts (Purulia, West Bardhaman, and Jhargram, & part of the West Medinipur) which are the extension of the Chota Nagpur Plateau, the residual part of the state geographically can be divided in to three natural geographical region viz., the northern Himalayan region included the Darjeeling Himalaya and the Northern Plain land extended from the South of the Darjeeling district up to the Malda District and the Southern massive Gangetic plain extended from the South of the Malda District to the creeks of the Sundarban Delta of the South 24 – Parganahs (Randha, Mitra & Mehta, 1964).

Map 1: Political Map of West Bengal showing its Districts.

[Source: Map of India Web portal.]

The state can be divided into five geographical regions (Chakravarty *et al.*, 1999) viz., the Darjeeling, the Terai – Duars, the Western undulating highland plateau, North & Bengal plain and Gangetic Delta. Among these five vegetational zone the Darjeeling – Himalayan zone is belongs to the East – Himalayan Hotspots zone and it is the richest floristic zone of the state. From the point of view of the orchid flora richness the Darjeeling Himalayan region and Terai – Duars region of the Northern half of the state is the richest area because they providing the most suitable environmental condition for the growth of the orchids.

Starting from the work of William Roxburgh's *Hortus bengalensis* (1814), the “Orchid flora” of the West Bengal state has been explored by various workers before independence as the flora of Bengal province under British rule and after independence as the state flora of West Bengal. Some of such eminent works of Bandyopadhyaya & Mukherjee (2017), Biswas (1946), Bist & Khatam (1999), Bose *et al.*, (1980,1999), Bruhl (1926), Clarke(1877, 1885, 1886), Das (1997, 1998, 2001, 2002, 2011), Das *et al.*, (1993,1995, 2010), Haines (1921 – 1924), Hara (1961,1965, 1966,1971), Hara *et al.*, (1978, 1979, 1982), Hedge (1990), Hooker, J. D. (1849 – 1850, 1888 - 1890), King & Pantling (1898), Mathew (1966),

Mitra & Mukherjee (2012), Mitra *et al.*, (2010), Mukherjee (1972), Mukherjee (1988), Ohashi (1975), Pierce & Cribb (2002), Pradhan (1976, 1979), Prain (1903a, 1903b, 1905), Sarkar (1995), Yonzane *et al.*, (2011, 2012a, 2012b,) and many others.

Materials and Methods

In this present work an attempt has been made to prepare an updated list of the Orchids grown within the political boundary of the state of West Bengal along with their up to date Nomenclature. The entire work is based on all available literature and the scrutiny of Herbarium specimens deposited at Llyod Botanical Garden Herbarium, Central National Herbarium (CAL), Industrial

Section of the Indian Museum (BSIS), BSI, Sikkim Himalayan Circle (BSC), and the data obtained from the different districts flora of the state. Often field trips are taken into consideration whenever it is required and the adequate data about the Orchid flora is also gathered from the field.

The data which are gathered during the study are represented here in the table 1 below. In the table all the binomials are arranged alphabetical order followed by their habitat, phenology, place of occurrence and the altitudinal range.

In the enumeration table the abbreviation used are – E = Epiphytes, M = Mycophytes, Tr = Terrestrial, S = Saprophytes, BTR = Buxa Tiger Reserve, Jan. = January, Feb. = February, Mar. = March, Apr. = April, Jun. = June, Jul. = July, Aug. = August, Sept. = September, Oct. = October, Nov. = November, Dec. = December, Fl. = Flowering, Fr. = Fruiting, m = Meter.

Observation

Please insert Table 1 (Table 1 List of the Orchids of West Bengal State) here which given as a separate table on different pages.

Results and Discussion

Orchidaceae is the second largest family in India represented by 1195 species under 177 genera (Singh et al., 2004). According to Chakravarty et al., (1999), the family Orchidaceae in West Bengal, is represented by 112 species under 43 genera. Mitra (2016), estimated 468 Orchid species under 111 genera from the state of West Bengal. In the present work analyzing the data given in the table 1, it is found that, the state of West Bengal harbor 460 Species & 6 varieties of Orchids, belonging to 110 genera. A comparative account of orchid taxa found to occur in the state of West Bengal as per Chakraverty et al., (1999) and Mitra (2016) with the present work has been presented in (Fig. 1).

Most of the orchids are found in the Darjeeling, Kalimpong districts and the Terai Duars region of the state. Out of the 466 taxa of Orchid, 321 are epiphytic, 2 are mycophytes, 1 – is saprophytes and the residual 142 taxa are terrestrial (Fig. 2).

It is evident from the Table 1 that on the basis of number of species *Bulbophyllum* is the most diversified genus bearing 52 species followed by *Dendrobium* and *Eria* with 49 and 20 species respectively. The six dominant Orchid genera are presented in Table 2 which constitute about 38.26%

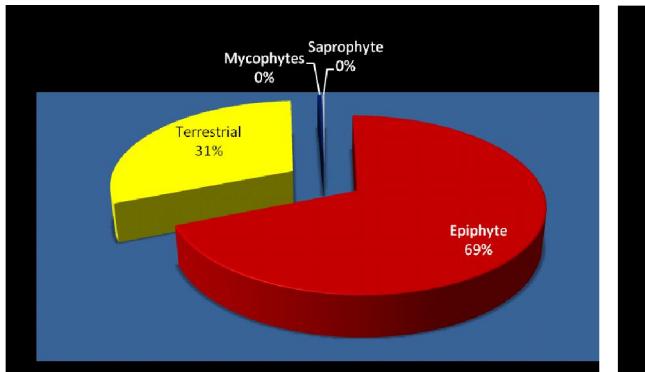

Fig. 2: Conspectus of the Habitat of the Orchids Species in West Bengal.

Table 2: Conspectus of the Most Diversified Orchid Genera of West Bengal.

Sl. No.	Name of the Genus	Numbers of Species
1	Bulbophyllum	52
2	Dendrobium	49
3	Eria	20
4	Cymbidium	19
	Liparis	19
5	Coelogyne	17

of total orchid species grown in the state. In contrary, there are 48 genera of orchids represented by single species each.

Conclusion

The Family Orchidaceae is a fascinating group of plants with a rich species diversity found to occur in the state of West Bengal. But due to rapid urbanization, deforestation and habitat destruction the natural population of Orchids of the state of West Bengal are under threat at present, especially in the Darjeeling Himalayan & the Terai Duars region. So, population study and status evaluation of the Orchids grown in the political boundary of the West Bengal are urgently needed for making conservation strategies to protect the beautiful creatures of the nature.

Acknowledgement

Authors are thankful to the Director Botanical Survey of India, Kolkata, and the Curator of Lloyd Botanical Garden, Darjeeling for their countless help provide during the herbarium scrutiny, and of the Library consultation.
